Foreword

Agricultural industries, albeit small, play an important role in maintaining Malta's unique rural environmental landscape. From the growing of arable crops to animal husbandry, these industries comprise a larger share of the total economy for Gozo than they do for mainland Malta, confirming the sister island's higher dependence on agriculture.

This tenth edition covers data for 2009, which was characterised by drop in the pig and cattle stock, and a slight increase in the sheep and goat population. The number of slaughtered pigs fell by 11.7 per cent. Slaughtered cattle, however, increased by 10.9 per cent.

In terms of agricultural output, drops were recorded in the value and volume of fresh vegetables passing through organised markets. The value of fresh fruit edged up, even though the wholesale value was marginally down. Milk and egg production registered declines in 2009 when compared to the previous year.

Fishing remains popular across the Maltese Islands, with licensed fishing vessels at the end of 2009 totalling 2,915, or 4.1 per cent higher over the previous year. The volume and wholesale value of fresh fish landings went up too.

In conclusion, I would like to acknowledge the input of Ronald Tanti, Antoine Farrugia, Nadia Fabri, Shirley Cutajar and Gayle Camilleri Scerri for their work in collecting and arranging the data included in this annual publication.

COMMENTARY

INTRODUCTION

The Agriculture and Fisheries 2009 publication provides users of official statistics with an overview of the wealth of information compiled and disseminated by the Agricultural and Fisheries Statistics Unit for the tenth year running. This publication is divided into nine chapters highlighting the most important aspects of the Agriculture and Fisheries sectors. Each chapter is outlined below with background information on the different themes, followed by a brief definition of the variables collected, the data availability and a brief commentary on the main findings. The main focus of each chapter is a set of tables and graphs that have been chosen to show the wide range of data available for a particular theme, providing users with information showing specific trends within the sectors.

The CD version is accompanied by a PDF version that is available on the NSO website (www.nso.gov.mt)

CHAPTER 1 – THE PIG INDUSTRY

Regulation (EC) No 1165/2008 of the European Parliament requires all Member States to undertake an annual Pig Census. Malta has been doing so annually since 2000. A postal census was sent to all licensed pig breeders in Malta and Gozo, all of whom responded to the questionnaire. In 2009, 65,918 pigs on 139 farms were registered, representing a slight increase of 0.6 per cent in the pig population and a decrease of 3 farms over 2008. Young pigs and fattening pigs increased by 0.9 per cent and 1.0 per cent respectively, over the comparative period in 2008. Breeding stock registered a decline of 1.9 per cent over 2008 (Table 1.6). Tables 1.7 and 1.8 reveal data on slaughtering, compiled from data supplied by the Department of Veterinary Services. The number of pigs slaughtered in 2009 (Table 1.7) dropped by 11.7 per cent to 90,140 pigs. As a result, the carcass weight of pigs slaughtered went down by 13.3 per cent to 7,369 tonnes in 2009, as shown in Table 1.8.

CHAPTER 2 - THE CATTLE INDUSTRY

A derogation obtained in 2005 allows Malta to utilise the bovine register to compile statistics on cattle in line with Regulation (EC) No 1165/2008 of the European Parliament so long as information from the cattle register is of no less quality than the data collected through statistical surveys. This register is maintained by the Department of Veterinary Services, whereby the register is 99.0 per cent reliable. The cattle stock as at December 2009 amounted to 16,264 heads on 367 farms (Table 2.1), representing a decline of 8.5 per cent in cattle population and a decrease of 16 farms over 2008. The decrease in stock was mainly characterised by a 17.6 per cent drop in the number of cattle aged between 1 and 2 years. Cattle aged less than 1 and cattle over 2 years of age declined by 5.1 per cent and 5.4 per cent respectively (Table 2.6). Dairy cows, which represented 42.6 per cent of all cattle in 2009 (Table 2.2), declined by 4.4 per cent over the amount of dairy cows, from 7,247 in 2008 to 6,931 in 2009. During 2009, the number of cattle slaughtered advanced by 10.9 per cent to 6,046 heads (Table 2.7), hence the 4.2 per cent increase in the carcass weight, to 1,543 tonnes (Table 2.8).

CHAPTER 3 - SHEEP AND GOATS

The annual stocks of all sheep and goats have been monitored since 2003 and are compliant with Regulation (EC) No 1165/2008 of the European Parliament of 19 November 2008. The Agricultural and Fisheries Statistics Unit bases its data on the list provided by the Department of Veterinary Services. Whether for own consumption or for commercial purposes, sheep and goats in Malta are primarily reared for their milk. The sheep and goats industry is mainly a

backyard industry and their offspring are not slaughtered at slaughterhouses since they are mainly destined for own consumption. The milk is mainly used to produce traditional cheeselets (*ġbejniet*).

In December, the register showed that 12,889 sheep (Table 3.1) were recorded in the Maltese Islands, marking a slight increase of 0.4 per cent over 2008. This was the result of a decrease of 31.5 per cent for lambs which was offset by an increase of 3.6 per cent and 19.6 per cent respectively in ewes and ewe lambs and in rams. Ewes and ewe lambs made up 87.5 per cent of all sheep, up by 2.8 per cent from 2008. The herd structure of sheep (Table 3.4) revealed that 31.3 per cent belong to herd size of 20-49 sheep, followed closely by 30.2 per cent which belong to herds with less than 10 sheep. Only 3.3 per cent belonged to herds with 100 sheep or more in 2009.

The goat population (Table 3.1) decreased by 5.9 per cent to 5,983 heads in December 2009 over December 2008. Table 3.7 shows a drop of 53.2 per cent in kids and 2.4 per cent in goats mated for the first time and goats that already kidded, while male goats registered an increase of 8.3 per cent. The goats' herd structure reveals that the smallest herd size made up 38.3 per cent, while herds with 100 goats or more made up 8.8 per cent (Table 3.5).

CHAPTER 4 - POULTRY

Data on the slaughtering of broilers are obtained annually from licensed slaughterhouses. In 2009, 2.9 million broilers (Table 4.1) were slaughtered, down by 9.1 per cent over 2008. As a result, the carcass weight of slaughtered broilers decreased by 5.9 per cent over 2008 (Table 4.2).

CHAPTER 5 - OUTPUT OF THE AGRICULTURAL INDUSTRY

In 2009, 39,812 tonnes of fresh vegetables yielding a wholesale value of €17.8 million passed through organised markets (Table 5.1). This resulted in a drop of 9.8 and 1.4 per cent in volume and wholesale value respectively when compared to the previous year. On the other hand, the volume of fresh fruit edged up by 0.9 per cent, while a decrease of 1.7 per cent in the wholesale value of fresh fruit was recorded in comparison to 2008.

The estimated total fruit and vegetable production are shown in Tables 5.12 to 5.16. When taking into consideration direct sales, own consumption and sales to processors, the estimated production of fresh vegetables amounted to 69,674 tonnes, down by 12.8 per cent on 2008, mainly on account of a decrease in the production of potatoes (-28.6 per cent), tomatoes (-26.5 per cent) and cauliflowers (-11.6 per cent), as shown in Table 5.13. On the other hand increases of 18.1 per cent and 4.2 per cent were registered for Dry onions and Vegetable Marrows respectively. The estimated producer value of fresh vegetables (Table 5.15) decreased slightly from €34.7 million in 2008 to €34.4 million in 2009 (-0.9 per cent). On the other hand, the estimated fruit production (Table 5.14) dropped by 10.8 per cent from 9,676 tonnes in 2008 to 8,634 tonnes in 2009. Decreases of 28.7 per cent, 27.9 per cent and 17.1 per cent were registered in the production of oranges, sweet oranges and lemons respectively. Similarly, the producer value of fresh fruit (Table 5.16) went down by 9.4 per cent, from €8.0 million in 2008 to €7.2 million in 2009.

Animal production (Table 5.17) decreased by 9.1 per cent, from 14,962 tonnes in 2008 to 13,598 tonnes during the year under review, mainly on account of drops of 13.3 per cent and 5.9 per cent in respect of swine and broilers respectively. On the other hand, the volume of bovine slaughtering went up by 4.2 per cent.

The total estimated milk production (Table 5.23) in 2009 amounted to 43.3 thousand tonnes, down by 1.4 per cent over 2008. This was the result of decreases of cow's and goat's milk production by 1.4 per cent and 4.5 per cent respectively. On the other hand, sheep's milk

production increased by 2.0 per cent. Egg production (Table 5.24) declined by 14.9 per cent over 2008, from 131.8 million to 112.2 million eggs during the year under review.

CHAPTER 6 - INDICES

For the second consecutive year, the Agricultural and Fisheries Statistics Unit is publishing a set of agricultural indices with 2005 as the base year. The base year has been changed to reflect the various changes in agricultural patterns that have evolved over the years. The 'all items' vegetables price index in 2009 (Table 6.1) rose by 8.8 per cent to 122.6 over 2008. Percentage changes of the vegetable price index varied from one product to another, the extremes being watermelons (+112.2 per cent) and dry onions (-20.3 per cent).

On the contrary, the 'all items' vegetables volume index (Table 8.4) dropped by 9.8 per cent to 98.4 points due to a drop in the volume of Potatoes (-29.9 per cent), Watermelons(-20.0 per cent), Tomatoes (-18.9 per cent), and Cauliflowers (-11.6 per cent). On the other hand there was an increase in the volume of Dry onions, Vegetables Marrows, and Lettuce by 18.1, 4.2 and 3.7 per cent respectively.

The 'all items' fresh fruit price index (Table 6.7) stood at 133.2 points, an increase of 12.5 per cent over 2008. This was the result of higher prices received for oranges (+80.3 per cent), strawberries (+43.2 per cent), peaches (+36.3 per cent), sweet oranges (+32.4 per cent) and lemons (+9.2 per cent). These increases outweighed the decreases in the other major fruit price index, mainly, cherry plums (-49.9 per cent), bambinella (-44.9 per cent) and early figs (-43.5 per cent).

The 'all items' fresh fruit volume index for 2009 edged up by 0.8 per cent over 2008. Increases in the volume index of cherry plums (+135.4 per cent), bambinella (+67.4 per cent) and early figs (+25.8 per cent) did not compensate for the decrease in the volume index of oranges (-28.7 per cent), lemons (-17.1 per cent) and strawberries (-4.8 per cent).

General price trends for the agriculture industry are monitored through the producer price index (Table 6.13). During 2009, an increase of 4.8 per cent was registered over 2008, from 111.1 to 116.4 points. Price gains were registered for Potatoes (+23.3 per cent), Fresh vegetables (+6.9 per cent) and Animals (+6.0 per cent). On the other hand, price reductions were registered for Forage (-1.6 per cent), Fruit (-2.1 per cent) and Animal products (-1.5 per cent). The input prices for agriculture (Table 6.15) declined by 6.4 per cent to 120.2 points from 128.4 in 2008. Main decreases were those for goods and services currently consumed in agriculture (-7.2 per cent), energy and lubricants (-10.2 per cent) and Animal feeding stuffs (-14.4 per cent).

CHAPTER 7 - ECONOMIC ACCOUNTS FOR AGRICULTURE

The aim of the Economic Accounts for Agriculture is to analyse the production process and the incomes generated by the agricultural industry. Gross agricultural production at producer prices for 2009 is estimated to have amounted to €130.7 million (-2.1 per cent) as shown in Table 7.1. After taking into consideration losses and intra-unit consumption, the final agricultural production at producer prices (Table 7.2) declined by 2.3 per cent to €123.6 million.

The producer value of crop output (Table 7.2), which amounts to 38.2 per cent of final agricultural production, went down by 2.2 per cent, due to a drop in the value of potatoes (-12.8 per cent), fruit (-8.9 per cent) and forage (-3.9 per cent) production. On the other hand, the producer value of vegetables rose by 1.2 per cent on account of higher prices fetched when compared to 2008.

Animal output, which represents 55.9 per cent of final production, went down by 2.3 per cent over 2008. The producer value of slaughtered animals edged up by 0.3 per cent as drops in the value of slaughtered cattle (-1.7 per cent) and pigs (-5.5 per cent) were offset by an increase in

the value of poultry by 6.6 per cent. The value of animal products fell by 6.6 per cent over 2008 on account of a decrease in the value of milk (-6.9 per cent) and egg (-5.6 per cent) production.

Intermediate consumption of the agricultural industry (Table 7.3) for 2009 amounted to €69.7 million, down by 13.1 per cent over 2008. Animal feed, which represented 48.8 per cent of all intermediate consumption, dropped by 21.4 per cent over the comparative period as a result of lower prices fetched for animal feed.

Subsidies on production (Table 7.4) amounted to €6.9 million in 2009 (-39.3 per cent) whereas subsidies not directly linked with production advanced by 73.3 per cent to €13.1 million. Overall, the total subsidies obtained through farming amounted to €20.1 million in 2009, up by 5.6 per cent when compared to 2008.

In 2009, the factor income of the agricultural industry (Table 7.4) increased by 14.0 per cent to €69.9 million. As a result, dependence of subsidies in factor income fell by 2.3 percentage points (-7.4 per cent), from 31.0 per cent in 2008 to 28.7 per cent in 2009.

Domestic sales (Table 7.6) amounted to €115.1 million in 2009, representing 88.0 per cent of gross agricultural production. Farm consumption amounted to €6.7 million in 2009, or 5.1 per cent of gross production, while exports of agricultural products, mainly potatoes, amounted to 1.2 per cent of the gross production in 2009.

CHAPTER 8 - SUPPLY BALANCE SHEETS OF AGRICULTURAL PRODUCTS

Supply balance sheets show the country's supply of a specific agricultural product over a specific period of time. The supply of the agricultural product comprises the total production of the product and the total quantity of the imported product, adjusted for any change in stocks that may have occurred during the reference period. The supply balance sheets also provide information on the usage of the specific agricultural product.

A set of the most important supply balance sheets have been published. Supply balance sheets are compiled through various sources. The International Trade and Transport Statistics Unit within the National Statistics Office provides data on commodity flows. Production data for various agricultural commodities are compiled through administrative sources, surveys and expert estimates.

CHAPTER 9 - FISHERIES

The fishing fleet register is updated by the Malta Centre for Fisheries Sciences. Maltstat, the fishing fleet register, has been established in collaboration with the Food and Agriculture Organisation (FAO) of the United Nations.

Information from the updated register on all licensed fishing vessels in Malta is analysed by the Agricultural and Fisheries Statistics Unit. Tables 9.1 to 9.5 focus on the vessel length, licence, type and port. A total of 2,915 licenced fishing vessels were registered as at end 2009. This represented an increase of 4.1 per cent over 2008, when 2,800 vessels were registered. The 5 to less than 10 metre category was made up of 1,481 vessels (Table 9.1), or 50.8 per cent of all fishing vessels. Multi-purpose vessels were still the most popular fishing vessels, amounting to 41.8 per cent of the total fishing fleet register (Table 9.2).

Statistics regarding monthly fish landings are obtained from the official fish market. These data are shown in Tables 9.6 to 9.10, where information includes the weight, wholesale value and price per kilogram of the major species landed. The volume of fresh fish landings increased by 317 tonnes, up by 34.6 per cent, from 917 tonnes in 2008 to 1,234 tonnes in 2009. Dorado, blue fin tuna and shrimp landings advanced by 35.5 per cent, 30.4 per cent and 21.2 per cent

respectively. On the other hand, landings of stone bass dropped by 35.7 per cent over 2008. An increase of 3.7 per cent for the wholesale value of fish landings in 2009 was registered over 2008. This reflected the lower average wholesale prices of marketed fresh fish (Table 9.8).

Price and volume indices of the main species landed are published in Tables 9.11 to 9.16. The base year for the price and volume indices is 2005. A decrease of 14.3 per cent was registered in the fresh fish price index when compared to 2008. On the other hand, the annual fresh fish volume index rose by 34.6 per cent, to 92.3 points, when compared to 2008 (Table 9.14).
